

MT2015-25: Tandem Myeloablative Consolidation Therapy and Autologous Stem Cell Rescue for High-Risk Neuroblastoma

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: Not specified

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- less than 30 years old when diagnosis of neuroblastoma is made - no uncontrolled infection - recovered from acute toxicities of last cycle of induction chemotherapy - see link to clinicaltrials.gov for complete inclusion and exclusion criteria

Conditions & Interventions

Conditions:

Cancer

Keywords:

Neuroblastoma

More Information

Description: The primary purpose of this study is to gain information, especially disease free outcomes, using the tandem approach as compared to the historical information of using a single transplant. The data will be analyzed for transplant "milestones" such as time to blood count recovery and how patients are doing at 3 months and 1 year after the treatment. Participation in this study will not alter treatment or medical care. All information for this study will be collected from medical records.
