Isakos: The impact of tibial tubercle-trochlear groove distance and patellar height on the outcome of isolated medial patellofemoral ligament reconstruction

Status: Recruiting

Eligibility Criteria

Sex: All
Age: 13 Years to 90 Years old
This study is NOT accepting healthy volunteers

Inclusion Criteria:
• MPFL Reconstruction

Exclusion Criteria:
• Trochleoplasty Required
• Prior ipsilateral knee surgery
• Iwano grade 2+
• Chondral injury requiring surgical treatment beyond debridement
• Major ligamentous injury to the knee

Conditions & Interventions

Interventions:
Other: Observational
Conditions:
Patellar Dislocation

More Information

Description: Our primary objective is to evaluate the influence of increased TT-TG distance and patella height on recurrent dislocation risk and patient-reported outcomes following isolated MPFL reconstruction. This is a multi-center observational trial where subjects already consented to undergo medial patellofemoral ligament reconstruction will agree to be followed for two years to determine their outcome
