

Comparison of normothermia maintenance between resistive blanket and forced air warming systems in renal transplant surgery

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- having a kidney transplant (not an emergency surgery)

Exclusion Criteria:

- previous organ transplantation or nephrectomy - diagnosis of end stage renal disease with decreased or no urine output - previous upper extremity amputation - sepsis or other infection - women who are pregnant

Conditions & Interventions

Conditions:

Kidney, Prostate & Urinary

Keywords:

Kidney transplant

More Information

Description: The maintenance of normal body temperature is important for all patients undergoing anesthesia to maintain important body functions. To help patients maintain normal body temperature during the surgery, a warming device is used. This study will compare the effectiveness of a resistive blanket warming device to the standard of care forced air warming device.
