

APOL1 Long-term Kidney Transplantation Outcomes Network

Status: Recruiting

Eligibility Criteria

This study is NOT accepting healthy volunteers

Conditions & Interventions

Conditions:

Kidney Disease, Chronic, Kidney Diseases, Kidney Failure

Keywords:

Apolipoprotein L1 gene (APOL1), Association of Organ Procurement Organizations (AOPO), Kidney Donor, Kidney Transplantation, Kidney Transplantation Outcomes Network, United Network for Organ Sharing (UNOS)

More Information

Description: The National Institutes of Health (NIH)-sponsored collaborative APOL1 Long-term Kidney Transplantation Outcomes Network (APOLLO) is charged with prospectively assessing the effects of renal-risk variants (RRVs) in the apolipoprotein L1 gene (APOL1) on outcomes for kidneys from donors with recent African ancestry and the recipients of their kidneys, after deceased- and living-donor renal transplantation. For the purposes of APOLLO, recent African ancestry is defined as individuals with similar genetic make-up to those currently residing in Africa. APOLLO will also study the impact of APOL1 RRVs on the health of living kidney donors with recent African ancestry.

Contact(s): Ghislaine Feussom - feuss001@umn.edu

Principal Investigator: Samy Riad

Phase: NA

IRB Number: STUDY00007354

System ID: NCT03615235
