

## A non-randomized prospective clinical trial comparing the non-inferiority of salpingectomy to salpingo-oophorectomy to reduce the risk of ovarian cancer among BRCA1 carriers (SOROCK)

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Female

**Age Group:** 35 years to 50 years old

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- 35 to 50 years old - women with a BRCA1 mutation - undergoing risk-reducing salpingo-oophorectomy or who have declined or elected to defer BSO - may be premenopausal or menopausal

---

**Exclusion Criteria:**

- history of any prior cancer who have received chemotherapy within the past 30 days or radiotherapy to abdomen or pelvis at any prior time - women with abnormal screening tests (TVUS, CA-125) suspicious for gross cancer within the past 180 days - additional criteria apply (study staff will review)

### Conditions & Interventions

**Interventions:**

Procedure: Bilateral Salpingectomy, Procedure: Bilateral Salpingectomy with Oophorectomy, Procedure: Biospecimen Collection, Other: Quality-of-Life Assessment, Other: Questionnaire Administration, Procedure: Transvaginal Ultrasound, Procedure: Ultrasound Imaging

**Conditions:**

Cancer, Women's Health

**Keywords:**

Clinics and Surgery Center (CSC), BRCA1, Ovarian Cancer

### More Information

**Description:** The purpose of the study is to compare two surgical procedures and their ability to decrease the risk of developing ovarian cancer for pre-menopausal women with BRCA1 mutations.

**Study Contact:** Britt Erickson - bkeric@umn.edu

**Principal Investigator:** Britt Erickson

**Phase:** NA

**IRB Number:** SITE00001183
