

Stratifying Patient Immune Endotypes in Sepsis (SPIES Study)

Status: Recruiting

Eligibility Criteria

Age: 18 Years and over

This study is also accepting healthy volunteers

Inclusion Criteria:

1. All adults (age ≥18) 2. Ability to obtain Informed Consent prior to blood collection.

Exclusion Criteria:

1. Current, chronic steroid use 2. Pregnancy 3. Current or recent (within 7 days) use of antibiotics.

Conditions & Interventions

Conditions:

Immune Diseases

Keywords:

Sepsis

More Information

Description: 3.1 Primary Endpoint/Event/Outcome: To determine if stimulated T cell production of IFN- γ and stimulated monocyte production of TNF α as quantitated by ELISpot, better predicts important clinical metrics of impaired immunity in patients with sepsis than commonly used protein and nucleic acid measures of immune endotype.
