

## A Phase 2, Open-Label, Basket Study of Atrasentan in Patients with Proteinuric Glomerular Diseases

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** Not specified

This study is NOT accepting healthy volunteers

#### Inclusion Criteria:

- Age 18 years and older for patients in the IgAN, FSGS, and Alport Syndrome cohorts - age 18-70 years for patients in the DKD cohort - receiving a maximally tolerated dose of RAS inhibitor therapy (ACEi or ARB) that has been stable for at least 12 weeks - there are different requirements for each diagnosis category & study staff will review these

#### Exclusion Criteria:

- current diagnosis of another cause of chronic kidney disease or another primary glomerulopathy - history of kidney transplantation or other organ transplantation - except for FSGS patients, use of systemic immunosuppressant medications, such as steroids, for more than 2 weeks in the past 3 months - blood pressure above 150 mmHg systolic or 95 mmHg diastolic - history of heart failure or a previous hospital admission for fluid overload. - history of liver disease - hemoglobin below 9 g/dL or blood transfusion for anemia within the past 3 months. - cancer in the past 5 years (except nonmelanoma skin cancer and curatively treated cervical carcinoma in situ) - women who are pregnant, breastfeeding, or intend become pregnant during the study - recently received an investigational agent - clinically significant unstable or uncontrolled medical condition (study staff will review)

### Conditions & Interventions

#### Conditions:

Kidney, Prostate & Urinary

#### Keywords:

Glomerular Disease, Alport Syndrome, IgAN, FSGS, Proteinuric Glomerular Diseases

### More Information

**Description:** The purpose of the research is to find out if atrasentan delays worsening of kidney function in IgAN, FSGS, and Alport Syndrome.

**Study Contact:** Amy Hanson - amhanson@umn.edu

**Principal Investigator:** Michelle Rheault

**Phase:** Phase 2

#### IRB

**Number:** STUDY00012146
