

Study of Nutraceutical Intervention with High Phenolic Extra Virgin Olive Oil and Curcumin for Neurofibromatosis, type 1 (NF1)

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- clinical diagnosis of Neurofibromatosis type 1 and/or genetic testing - measurable skin neurofibromas

Exclusion Criteria:

- treatment with selumetinib or other MAPK, MEK or mTOR inhibitors, other targeted therapies, chemotherapy or radiation (study staff will review) - swallowing difficulties or strong gag reflex that make it difficult to take study treatment - supplement with high phenolic olive oil or curcumin within six months - women who are pregnant or anticipate becoming pregnant - history of other physical or mental health issues (study staff will review)

Conditions & Interventions

Conditions:

Rare Diseases

Keywords:

Dietary Supplement: curcumin, high phenolic extra virgin olive oil, Neurofibromatosis, Type 1 (NF1)

More Information

Description: This is a single center, open label, Phase I clinical trial of bioactive curcumin with high phenolic extra virgin olive oil (HP-EVOO) to treat cutaneous neurofibromas (cNF) in Neurofibromatosis, type 1 (NF1) patients (aged 18 years or older).
