

## Profiling of Adipose Tissue Depots and Immune Correlates

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** 18 years and over

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

1. Age 18 years or older
  2. Undergoing abdominal surgical procedure with general anesthesia
- 

**Exclusion Criteria:**

1. Pregnancy or nursing
2. Exclusion at the discretion of attending physician or Eligibility Committee

### Conditions & Interventions

**Conditions:**

Digestive & Liver Health, Diabetes & Endocrine, Prevention & Wellness

**Keywords:**

abdominal surgery, fat collection

### More Information

**Description:** This is a study of individuals older than 18, undergoing abdominal surgery, and are amenable to fat samples being collected during their surgical procedure, with the option to participate in other tests that can provide information on insulin sensitivity and fat distribution. This study is trying to figure out how fat tissue is related to an individual's health status and health conditions, and the analysis of the aging of cells that make up the human body.
