

Genetic Modifiers and Glycemic Variability in Turner Syndrome

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: Not specified

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- Participants with a diagnosis of Turner syndrome by karyotype - Ages 3 to 80

Exclusion Criteria:

- Additional genetic diagnosis detected on karyotype, CMA, or FISH - Prior diabetes diagnosis - Current or recent (last 72 hours) use of systemic glucocorticoids - Current use of hypoglycemic agents - History of solid organ or bone marrow transplant - Currently pregnant - Non English-speaking

Conditions & Interventions

Conditions:

Diabetes & Endocrine, Rare Diseases

Keywords:

Turner Syndrome

More Information

Description: This study is looking at glucose (blood sugar) patterns in participants with Turner Syndrome between the ages of 3-80 years old. This will be done by obtaining 2 hours frequent blood sampling by completing an Oral Glucose Tolerance Test and a Mixed Meal Tolerance Test. Participants will also wear a continuous glucose monitor for 2 weeks. Along with the OGTT and MMTT, participants are asked to provide a blood sample for DNA and RNA testing. Participant's parents are asked to provide a saliva sample for DNA testing
