

The DART Study

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is also accepting healthy volunteers

Inclusion Criteria:

- criteria for healthy volunteers: age 18 or older and able to read English

Exclusion Criteria:

- diagnosis or history of depression, bipolar disorder, Generalized Anxiety Disorder, or other psychiatric conditions.

Conditions & Interventions

Conditions:

Mental Health & Addiction

Keywords:

Depression, EEG, TMS, Treatment Resistant Depression

More Information

Description: We are interested in learning more about how Transcranial Magnetic Stimulation (TMS) and ketamine affect depressive symptoms. We are most interested in learning how anhedonia (lacking pleasure in life) is changed by these treatments. Patients who have been diagnosed with treatment-resistant depression (TRD) and who are also scheduled to receive ketamine or Transcranial Magnetic Stimulation (TMS) are being recruited for this study. We are looking to enroll a second group of participants into a healthy control group who have not been diagnosed with a psychiatric disorder. This group will have a single 60 minute visit in which computer tasks and surveys will be completed while wearing an electroencephalogram (EEG) head cap to record brain activity.
