

## MT2023-10: A Phase 1 Study of FT522 in Combination with Rituximab in Participants with Relapsed/Refractory B-Cell Lymphoma

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** 18 years and over

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- diagnosis of B-cell lymphoma (BCL) - at least 1 prior systemic regimen of treatment - men and women participants of childbearing potential who engage in heterosexual intercourse must agree to use specified method(s) of contraception

---

**Exclusion Criteria:**

- women who are pregnant or breastfeeding - capable of only limited selfcare; confined to bed or chair more than 50% of waking hours - body weight less than 50 kg (110 lb.) - additional medical diagnosis (study staff will review)

### Conditions & Interventions

**Interventions:**

Drug: Bendamustine, Drug: Cyclophosphamide, Drug: FT522, Drug: Fludarabine, Drug: Rituximab

**Conditions:**

Cancer

**Keywords:**

Clinics and Surgery Center (CSC), Lymphoma, Relapsed/Refractory B-Cell Lymphoma

### More Information

**Description:** We are studying FT522 - a new product that is made by modifying cells in a laboratory - both with and without additional drugs, to see if it can help treat people with B-cell lymphoma. This study is for people who have had at least one treatment for their lymphoma, but the cancer either returned or did not respond to the treatment. We are testing this product to see what side effects it might have, as well as to see whether it is effective at treating B-cell lymphoma.
