Conditions & Interventions

Conditions:

Children's Health, Community Health

Keywords:

child, children, eat, eating, feeding, food, kid, nutrition, parent, preschool, psychology

More Information

Description: This research is being done to help better understand the ways parents interact with their children at meal and snack times at different time points during the day and in different circumstances. We want to study how the feeding approaches affect the child's dietary intake over time. Study participation will be two years with activities every six months.
