

A Retrospective Follow-Up Study of the Durability of Antiviral Therapy on Long-Term Hearing and Neurodevelopmental Outcomes Among Patients Treated for Congenital Cytomegalovirus Infection as Infants or Toddlers

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: Not specified

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- at least 2 years old - received intravenous ganciclovir or oral valganciclovir to treat congenital cytomegalovirus (CMV) infection - may have participated in the CASG study of the treatment of congenital CMV

Exclusion Criteria:

- unable to comply with study-related procedures

Conditions & Interventions

Conditions:

Children's Health, Infectious Diseases

Keywords:

CMV, Cytomegalovirus

More Information

Description: The purpose of this study is to find out if treatment of congenital cytomegalovirus (cCMV) with an antiviral medicine has any impact on hearing, development of cancers, overall development and sexual maturity development. No treatment for cCMV will be provided in this study.
