

Addition of a pectoserratus block to interscalene block in patients undergoing total shoulder replacement.

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- 18 years to 85 years old - having a total shoulder arthroplasty or reverse total shoulder arthroplasty

Exclusion Criteria:

- unable to receive regional anesthesia or nerve block - Non-English speakers - women who are pregnant - currently using opioids and people who have chronic pain

Conditions & Interventions

Conditions:

Bone, Joint & Muscle

Keywords:

Clinics and Surgery Center (CSC), Shoulder Replacement, Total Shoulder Arthroplasty

More Information

Description: This research is being done to determine if pectoserratus block with bupivacaine will provide improvement in pain control and decrease opioid use, relative to pectoserratus block with a saline solution, among patients undergoing total shoulder arthroplasty.
