

Development of Tobacco Related Biomarkers

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is also accepting healthy volunteers

Inclusion Criteria:

This study is recruiting people who fit one of the following: - smokes cigarettes daily - vapes daily - uses smokeless tobacco - smokes cigars - uses nicotine gum, lozenges, patches, nasal spray, pouches, or inhaler - formerly smoked cigarettes daily

Exclusion Criteria:

- younger than 21 years old - smokes or vapes marijuana

Conditions & Interventions

Conditions:

Community Health, Prevention & Wellness

Keywords:

chewing, cigarettes, cigars, nicotine, smokeless tobacco, smoking, tobacco, vaping, gum, patches

More Information

Description: To maintain a biorepository (sample bank) of biological samples from different tobacco users and non-users to investigate how tobacco and nicotine products affect our bodies. The samples will be used by researchers to develop methods to look for biological "markers" (biomarkers), or chemical changes in the body, that occur due to tobacco or nicotine exposure. The goal is to eventually use these biomarkers to improve detection, prevention, and treatment strategies for tobacco-related diseases.
