

Transcranial Magnetic Stimulation to Augment Exposure and Response Prevention for Pediatric OCD

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: Not specified

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- 12 to 21 years old - right-handed - currently have OCD symptoms

Exclusion Criteria:

- inability to have a MRI - left-handed - study staff will review additional exclusion criteria

Conditions & Interventions

Conditions:

Brain & Nervous System, Children's Health, Mental Health & Addiction

Keywords:

Obsessive-compulsive disorder, OCD, psychology, therapy, TMS, transcranial magnetic stimulation

More Information

Description: We are doing this study to see if we can improve the standard treatment for OCD, Exposure with Response Prevention, by pairing it with Transcranial Magnetic Stimulation to the parts of the brain that cause OCD symptoms.
