

## Testing ACL Reconstruction Outcome Predictions (TAROT)

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** Not specified

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- patients undergoing primary ACLR (anterior cruciate ligament reconstruction) at the University of Minnesota, Tria and CentraCare.

### Conditions & Interventions

**Conditions:**

Bone, Joint & Muscle

**Keywords:**

ACL, anterior cruciate ligament, anterior cruciate ligament reconstruction, Clinics and Surgery Center (CSC), ortho surgeon prediction

### More Information

**Description:** The purpose of this study is to see how accurately orthopaedic surgeons predict outcomes for people who have an anterior cruciate ligament (ACL) reconstruction. Patients will be asked to complete post-surgery surveys about occurrence of side effects, return to activity, reoperation, and satisfaction with the surgery at 4 months, 2 years, and 5 years.
