

A Multicenter Observational Study of GammaTile Surgically Targeted Radiation Therapy (STaRT) in Intracranial Brain Neoplasms

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: Not specified

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- undergo maximum safe resection of intracranial neoplasm(s) AND implantation of GammaTiles.

Exclusion Criteria:

- unable to have pre-operative and post-operative imaging for disease and implant assessment - major medical or psychiatric illness (study staff will review) - unable to speak and read English

Conditions & Interventions

Conditions:

Brain & Nervous System, Cancer

Keywords:

Brain Tumor

More Information

Description: We are studying the effectiveness of GammaTiles TM that are placed during surgery done to remove brain tumors. GammaTiles TM are used to deliver radiation to the surgical area in the brain. We are collecting information about the effectiveness and side effects and will compare to people who receive the usual treatment.
