

Multicenter ALS Imaging Study

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- for people who have Amyotrophic Lateral Sclerosis (ALS): less than 24 months since symptoms started, and diagnosis of probable or definite ALS - for people with ALS and healthy volunteers: able to read, write and speak English, and able to have a MRI

Exclusion Criteria:

- any condition that makes MRI unsafe or if unable to comply with instructions - healthy volunteers with clinically significant abnormal findings on neurological examination

Conditions & Interventions

Conditions:

Brain & Nervous System, Rare Diseases

Keywords:

ALS, Amyotrophic Lateral Sclerosis, Primary Lateral Sclerosis

More Information

Description: The purpose of the study is to test new biomarkers of ALS using MRI scans at 3 Tesla (3T). A biomarker is a measurable characteristic that can be used as an indicator of a particular disease state. Identifying biomarkers in ALS will help test new treatments and may help us make diagnoses earlier.
