

## ABATE-IP-18: A Phase 1b, Multi-center Study of IV Gallium Nitrate in Patients with Cystic Fibrosis who are Colonized with Nontuberculous Mycobacteria (The ABATE Study)

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** 18 years and over

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- diagnosis of cystic fibrosis - persistent Nontuberculous Mycobacterium lung infection (NTM) - able to expectorate sputum - enrolled in the CFF Patient Registry - see link to [clinicaltrials.gov](http://clinicaltrials.gov) for complete inclusion & exclusion criteria

---

**Exclusion Criteria:**

- history of solid organ or hematological transplantation - current diagnosis of osteoporosis - women who are pregnant or breast feeding - men and women who are unwilling to practice a medically acceptable form of contraception

### Conditions & Interventions

**Interventions:**

Drug: Gallium nitrate

**Conditions:**

Rare Diseases, Breathing, Lung & Sleep Health

**Keywords:**

CF, Cystic Fibrosis, Nontuberculous Mycobacterium Infection, NTM

### More Information

**Description:** The purpose of this research study is to test the safety of giving two separate 5-day infusions (starting on Day 1 and again around Day 15) through a vein with a drug called gallium nitrate. Laboratory tests suggest that this drug may be able to fight Nontuberculous Mycobacteria (NTM) infections
