

## Bladder Management Patient Reported Outcomes for Young Adults with Spina Bifida

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** Not specified

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- at least 14 years old - diagnosis of spina bifida - able to effectively communicate in English

---

**Exclusion Criteria:**

- reconstructive surgery or urinary diversion in the last 3 months - admitted to the hospital admission in the last month

### Conditions & Interventions

**Conditions:**

Brain & Nervous System

### More Information

**Description:** The purpose of this study is to determine how different bladder management methods affect the quality of life for young people with spina bifida. We hope to find out if certain bladder management methods are associated with a better quality of life. This information could help doctors make better treatment decisions and counsel young people living with spina bifida.
