

Pilot study_Jaw Muscle Metabolic and Brain-Derived Phenotypes of Chronic TMD Pain

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- age between 18-74 years - pain-free participants OR chronic jaw pain (> 3 months), - have a minimum set of teeth present

Exclusion Criteria:

- certain medical conditions (examples: heart disease, diabetes, autism, trigeminal neuralgia) - any MRI contraindications (examples: metal implants, claustrophobia) - left-handed only

Conditions & Interventions

Conditions:

Dentistry

Keywords:

Chronic Jaw Pain, Functional Brain Imaging, Temporomandibular Disorders, TMJ

More Information

Description: The goal of this study is to learn more about a new way of gathering information about a person's jaw muscle pain – taking scans of the jaw muscles while a person bites down on a special device. It is hoped that the information learned in this study will help the study team to design a bigger study on this new way of learning about jaw muscle pain, which may lead to better, more individualized treatments for jaw muscle pain for future patients.
