

Standardized Microbiota Transplant Therapy in Crohn's Disease

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- 18 to 89 years old - English speaking - Diagnosis of Crohn's Disease (CD) - Current CD therapies are in the maintenance phase of dosing - Women who could become pregnant must remain abstinent or use a highly effective form of birth control (e.g., oral contraception, transdermal patch, barrier, intrauterine device) - See link to clinicaltrials.gov for complete inclusion and exclusion criteria

Exclusion Criteria:

- Extensive bowel resection or ileostomy or colostomy - Diagnosis of ulcerative colitis - Women who are pregnant or breastfeeding - History of anaphylactic food allergies

Conditions & Interventions

Interventions:

Biological: MTP-101C, Biological: MTP-101S

Conditions:

Digestive & Liver Health

Keywords:

Clinics and Surgery Center (CSC), Crohn's Disease, Fecal Microbiota, Gut bacteria, CD

More Information

Description: The goal of this study is to determine if healthy donor microbes released in the small intestine act the same way as healthy donor microbes released in the large intestine for people with Crohn's Disease. We will see what good bacteria are present in intestinal biopsies at 8 weeks and look for improvement in inflammation with colonoscopy.
