

## Standardized Microbiota Transplant Therapy in Crohn's Disease

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** 18 years and over

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- 18 to 89 years old - English speaking - Diagnosis of Crohn's Disease (CD) - Current CD therapies are in the maintenance phase of dosing - Women who could become pregnant must remain abstinent or use a highly effective form of birth control (e.g., oral contraception, transdermal patch, barrier, intrauterine device) - See link to [clinicaltrials.gov](http://clinicaltrials.gov) for complete inclusion and exclusion criteria

---

**Exclusion Criteria:**

- Extensive bowel resection or ileostomy or colostomy - Diagnosis of ulcerative colitis - Women who are pregnant or breastfeeding - History of anaphylactic food allergies

### Conditions & Interventions

**Interventions:**

Biological: MTP-101C, Biological: MTP-101S

**Conditions:**

Digestive & Liver Health

**Keywords:**

Clinics and Surgery Center (CSC), Crohn's Disease, Fecal Microbiota, Gut bacteria, CD

### More Information

**Description:** The goal of this study is to determine if healthy donor microbes released in the small intestine act the same way as healthy donor microbes released in the large intestine for people with Crohn's Disease. We will see what good bacteria are present in intestinal biopsies at 8 weeks and look for improvement in inflammation with colonoscopy.
