

Health Beliefs and Behaviors of Lung Cancer Screening in Chinese Americans

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is also accepting healthy volunteers

Inclusion Criteria:

- 50 to 80 years old - self- identified as a descendent of Chinese - live in the United States - current smoker or quit in the past 15 years - can read Chinese/English

Exclusion Criteria:

- history of lung cancer - cognitive problems

Conditions & Interventions

Conditions:

Cancer, Prevention & Wellness

Keywords:

Chineses, Lung Cancer Screening

More Information

Description: The rate of lung cancer screening is not optimal among Chinese American high-risk smokers, although there is a high lung cancer rate among this population. We want to validate the adapted Chinese Lung Cancer Screening Health Belief Scale, enable its usage in Chinese Americans, and further explore the relationship between lung cancer screening health beliefs and health behavior among Chinese Americans. We will also aim to identify the differences in health beliefs regarding lung cancer screening between high-risk populations in China and Chinese Americans, and to examine factors influencing these differences.
