Exclusion Criteria:

- previous diagnosis of high-grade anal dysplasia or anal cancer

Conditions & Interventions

Conditions:

Cancer, Community Health, Prevention & Wellness

Keywords:

Anal Cancer, Clinics and Surgery Center (CSC)

More Information

Description: This study will help to identify challenges and barriers to self-performing anal cancer screening tests, and may identify unique ways to make this form of screening easier, more cost-effective, and more frequently performed. We believe that it has the potential to minimize the frequency of both disease and death from anal cancer among high-risk patient groups.
