•major neurological disorder
•medical condition that would interfere with participation - currently at risk for suicidal behavior

Conditions & Interventions

Conditions:

Mental Health & Addiction

Keywords:

Psychosis, Schizoaffective Disorder, Schizophrenia

More Information

Description: In this study, participants will complete two to three appointments within two weeks. During these appointments, they will complete interviews and questionnaires about their life experiences and mental health. An EEG test will also be conducted while they complete computerized tasks. We are recruiting two groups of participants for this study. One group will include individuals who experience hallucinations, delusions, paranoia, or a psychosis spectrum disorder (i.e., schizophrenia), and the other group will be individuals who do not have a diagnosis or family history of schizophrenia, bipolar disorder, or autism spectrum disorder.
