

## 64Cu-SAR-bisPSMA Positron Emission Tomography: A Phase 3 Study of Participants with Biochemical Recurrence of Prostate Cancer

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male

**Age Group:** 18 years and over

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- confirmed adenocarcinoma of prostate (PC) - completed definitive therapy - able to do all selfcare but unable to carry out any work activities; up and about more than 50% of waking hours - see link to [clinicaltrials.gov](http://clinicaltrials.gov) for complete Inclusion criteria

---

**Exclusion Criteria:**

- small cell or neuroendocrine PC - ongoing treatment or treatment within 6 months with any systemic therapy (e.g. any investigational therapy, androgen-deprivation therapy, antiandrogen, gonadotropin-releasing hormone, luteinizing hormone-releasing hormone agonist or antagonist, chemotherapy, immunotherapy or radiotherapy) for PC - see link to [clinicaltrials.gov](http://clinicaltrials.gov) for complete Exclusion criteria

### Conditions & Interventions

**Conditions:**

Cancer

**Keywords:**

Clinics and Surgery Center (CSC), Prostate Cancer, Radiotherapy. PC

### More Information

**Description:** The primary purpose of this study is to see how well the 64Cu-SAR-bisPSMA PET/CT scan can find prostate cancer that has come back, based on expert review.
