

## COgnitive STrategies in Early Psychosis 1

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** 18 years and over

This study is also accepting healthy volunteers

**Inclusion Criteria:**

- 18 to 35 years old - speak English as primary language

---

**Exclusion Criteria:**

- major medical diagnosis such as neurological disorder, kidney, heart, liver disease, or - people who are pregnant, breastfeeding, or planning to become pregnant - have a diagnosis or immediate family history of a psychotic, bipolar, or autism spectrum disorder - study staff will review additional criteria

### Conditions & Interventions

**Conditions:**

Mental Health & Addiction

**Keywords:**

mental health

### More Information

**Description:** This study is about decision making in psychosis spectrum disorders, like schizophrenia. We will study how a single dose of a study agent called modafinil changes how people complete computer tasks and changes how the brain functions. We hope to improve our understanding of psychosis to help people in the future.

**Study Contact:** Kaylee Farley - enevo021@umn.edu

**Principal Investigator:** Sophia Vinogradov

**IRB Number:** STUDY00025500
