

## Cell free and circulating tumor DNA in the management of muscle invasive bladder cancer, a prospective cohort study.

**Status:** Recruiting

### Eligibility Criteria

**Sex:** Male or Female

**Age Group:** 18 years and over

This study is NOT accepting healthy volunteers

**Inclusion Criteria:**

- people who may have invasive bladder cancer - planning to have a transurethral resection of bladder tumor (TURBT)

---

**Exclusion Criteria:**

- women who are pregnant - any other active cancer - at least able to do self care, up and walking & carry out light work or sedentary activity

### Conditions & Interventions

**Conditions:**

Cancer

**Keywords:**

Clinics and Surgery Center (CSC), Bladder Cancer, TURBT

### More Information

**Description:** The goal of this study is to identify the role of cell-free fragments of DNA (cfDNA) and circulating tumor DNA (ctDNA) found in blood and/or urine of patients with bladder cancer in determining whether some patients can avoid chemotherapy and or radical cystectomy. Large numbers of samples need to be analyzed. Participants will be asked to provide additional blood and urine samples; no treatment is provided in this study.
