

CVD in Women with CF: Assessing Cardiovascular Risk in Menopausal Women with Cystic Fibrosis

Status: Recruiting

Eligibility Criteria

Sex: Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- women ages 45 years and older - diagnosed with cystic fibrosis

Exclusion Criteria:

- pregnant or suspect you may be pregnant - cognitive or memory difficulties - unable to read or speak English

Conditions & Interventions

Conditions:

Rare Diseases, Rare Diseases, Respiratory System, Heart & Vascular, Women's Health

Keywords:

cf, cfrd, Clinics and Surgery Center (CSC), cvd, diabetes, menopause, cardiovascular disease, cystic fibrosis

More Information

Description: Women with cystic fibrosis (CF) during peri- and postmenopausal stages may be at increased risk for cardiovascular disease, partly mediated by accelerated cardiometabolic risks. This cross-sectional study aims to address critical gaps in understanding cardiovascular disease (CVD) risk in women with CF and will inform early interventions tailored to this growing population.
