

Assessment of Patients' Perspectives Regarding Primary Care Utilization within the Adult Cystic Fibrosis Population

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: 18 years and over

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- adults who have cystic fibrosis (CF) and receive care at the MN CF Center

Conditions & Interventions

Conditions:

Breathing, Lung & Sleep Health, Rare Diseases

Keywords:

CF, cystic fibrosis, lung, respiratory

More Information

Description: The purpose of this project is to ask adults with cystic fibrosis (CF) about their opinions and experiences with working with a primary care provider (PCP). It is also to assess the utilization of primary care providers in a complex medical care patient population whose primary providers have historically had a medical home in the pulmonary subspecialty.
