

MT2021-30: Severe Combined Immune Deficiency: Prospective and Longitudinal Study of Genotypes, Management and Outcomes

Status: Recruiting

Eligibility Criteria

Sex: Male or Female

Age Group: Not specified

This study is NOT accepting healthy volunteers

Inclusion Criteria:

- have suspected or confirmed severe combined immunodeficiency (SCID) - some participants with confirmed SCID may have already received treatment for the condition

Exclusion Criteria:

- have another primary immune deficiency that does not meet the study's SCID criteria - have an immune deficiency caused by another condition, including HIV infection

Conditions & Interventions

Conditions:

Rare Diseases, Immune Diseases

Keywords:

Immune System, Immunodeficiency, Rare Disease, SCID

More Information

Description: This study follows people with severe combined immunodeficiency (SCID) over time. We want to learn how people do before and after treatment, including potential factors that may affect their long-term health. By taking part, participants may be able to help us better understand SCID and the effects of treatment.
